

Appendix — Participant Biographies

Embodied Compliance Council — AY 2026-2027

Dr. NGO — Primary PI

[BIO TO BE PROVIDED — placeholder for Dr. NGO’s standard CV biography, ~150 words, covering academic appointments at Katz School of Science and Health, research interests in [domain], representative publications in regulated AI / compliance / banking technology, and prior advising of graduate students on banking-vertical research projects.]

Prof. Michael Yang — Co-PI

[BIO TO BE PROVIDED — placeholder for Prof. Yang’s standard CV biography, ~150 words, covering academic appointments at Katz School of Science and Health, research interests in [domain — quantitative finance / AI / data analytics], representative publications, and prior capstone advising experience including the trading-vertical capstone of which the Embodied Compliance Council trading-quest application is the technical foundation.]

Loredana C. Levitchi — External Collaborator

[BIO TO BE PROVIDED — placeholder for Loredana Levitchi’s biography, ~100 words, covering current institutional affiliation, banking-risk research expertise (VaR, Expected Shortfall, default probability, loss-given-default modeling), prior IEEE / banking-journal publications, and her role as risk-math co-author on the banking-vertical IEEE paper resulting from this project. Loredana is not a Katz employee and is not paid from this grant; she contributes risk-math IP and serves as IEEE-paper co-author.]

Alex Xiaoyu Ji — Graduate Research Assistant

Alex Xiaoyu Ji is a full-time graduate student at Katz School of Science and Health, Yeshiva University, focused on AI-native agentic systems for regulated workflows. Prior to the Embodied Compliance Council, he developed `council-diff` (an open-source TypeScript library for 5-voice AI deliberation with Brier audit, npm v0.4.2 published 2026-06-15), `capstone-oralex-a-calibration` (Python calibration toolkit: ECE, temperature scaling, Reflexion, Kelly sizing, Sakana DG self-modification, 64 unit tests green), and the `solo-founder-os` 11-agent stack for one-person operations. His work has been featured in submissions to the Slack Agent Builder Challenge, Splunk Agentic Ops Hackathon, and the Band of Agents Hackathon 2026. He is the primary developer of the Embodied Compliance Council codebase and will co-author the ICAIF 2027 and IEEE banking-vertical papers.

Additional Katz Graduate RA (post-award hire)

To be recruited after award notification (target start: 2026-09-15). Role split: - **Option A:** Banking risk-math validation — implement Loredana's Python risk-math modules into `orallexa-risk` package, write unit tests against the BR doc reference values, and contribute to the IEEE banking-vertical paper as student co-author. - **Option B:** Spatial XR frontend — extend `trading-quest` and `banking-quest` WebXR applications with MediaPipe Hands gesture input and integrate the audit panel into the immersive 3D scene for Meta Quest 3S user studies.

Hire decision will be made based on applicant qualifications and the priority of the empirical phase by August 30, 2026.
